Comfort on the go

A reliable, custom-made bike

The Singly Air offers a safe and comfortable riding experience thanks to its adjustable air suspension. The bike is known for its comfortable seating position, supported by a low center of gravity and the ability to adjust both the handlebars and the seat. The Singly Air is available with or without electric assistance, allowing you to choose what best suits your needs.

Low Step-Through

The Singly Air features an extremely low and spacious step-through thanks to the downward-routed bike chain. If desired, you can easily raise the handlebars to create even more space when mounting and dismounting.

Tight Turning Radius

Thanks to its compact design and agile steering mechanism, the Singly Air has a tight turning radius. This makes parking or turning around on the road very easy. Additionally, it takes up little space when stored in, for example, a shed or garage.

The seat of the Singly Air is fully adjustable. You can individually set the seat angle, seat surface, position relative to the handlebars and pedals, and the backrest height for maximum ergonomics.

The Singly Air is available with or without pedal assist and start-up aid.

Relaxed Seating

For optimal comfort, the Singly Air is equipped with an ergonomically shaped seat that is infinitely adjustable. This allows the seat height to be easily adapted to your body length. The seat angle is also adjustable for a more active or more relaxed seating position.

Pedal Assist

The Singly Air is available both with and without pedal assist. The electric support gives you an extra boost, making cycling easier, helping you climb hills more effortlessly, and allowing you to ride longer distances. The Singly Air E features a reliable front hub motor and a removable battery located under the rear basket. The motor can be personally adjusted, with options for 3, 5, or 9 levels of assistance.

Custom Fitting

Do you have special requirements or need specific adaptations to cycle optimally? The Singly Air can be fully customized and equipped with various accessories. You can also further personalize the bike by choosing your own color, among other options.
